```
1 {
2   "bynder_connection": {
3     "domain": "dataggo-demo.bynder.com",
4     "token": "%BYNDER_TOKEN%"
5   },
6   "delta": false,
7   "shopifyShopUrl": "dataggo.myshopify.com",
8   "urlTransformations": [
9     "transformBaseUrl",
10    "original"
11  ],
12  "productSkuMetadata": "sku",
13  "variantSkuMetadata": "variantSku"
14  "productSkuSeparator": ", ",
15 }
```

## Explanations [↗](#)

| Configuration key   | Description   | Required | Example   |
|---------------------|---|----------|---|
| bynder_connection   | Bynder connection required data.<br>token should be a secured variable.   | Yes      | 1 {<br>2   "domain": "demo.bynder.com",<br>3   "token": "%BYNDER_TOKEN%"<br>4 } |
| delta               | If yes, only assets updated since last job execution will be read.<br>Set <code>false</code> to run a full synchronisation.<br>Possible values : <code>true</code> or <code>false</code><br>Default value : <code>true</code> | No       | 1 false   |
| shopifyShopUrl      | Your shopify url  | Yes      | 1 dataggo.myshopify.com   |
| urlTransformations  | All transformations to send to Shopify<br>1 transformation = 1 image  | Yes      | 1 [<br>2   "transformBaseUrl",<br>3   "original"<br>4 ]                         |
| productSkuMetadata  | The metadata in Bynder assets that contains the product skus  | Yes      | 1 sku   |
| variantSkuMetadata  | The metadata in Bynder assets that contains the variant skus  | No       | 1 variant_sku   |
| productSkuSeparator | The separator to use to split the value of <code>productSkuMetadata</code> and <code>variantSkuMetadata</code><br><br>The separator is not required for multiselect metaproperties<br>default value : <code>,</code>          | No       | 1 ;   |
